

SUPPLEMENTARY NOTE TO THE THIRTEENTH REPORT
OF THE REGENTS ON THE STATE CABINET.

IN the Thirteenth Annual Report of the Regents upon the State Cabinet, I published a notice of the Trilobites of the Quebec group, occurring at Georgia (Vermont), proposing the generic names BATHYNOTUS and BARRANDIA for the two generic forms. At the moment of sending the manuscript to press, I had changed the generic name OLENELLUS, at first proposed, to BARRANDIA, in honor of the author of the "*Système Silurien de Bohême*;" unfortunately overlooking the fact that Prof. M'COY had proposed the same name for a genus of trilobites. As the later name is untenable, even if the genus proposed by M'COY should be abandoned, I shall propose to return to the name OLENELLUS; retaining the views originally expressed as to the relations with PARADOXIDES and OLENUS, the primordial types to which the new genus is allied.
